

# **VERBAL WARNING**

## Audio Safety Messaging System

- Up to 6 Programmable Alerts.
- Alerts can be user-programmed.
- Multi-language.
- Cost-effective.
- Easy to install.
- Can have separate messages for inside and outside the vehicle.
- Automatically activated—you choose the activation source.
- Small footprint—fits virtually anywhere.

The creators of Bus-Scan and Bus-Cam introduce Verbal Warning—a voice messaging system that helps to prevent accidents in the danger zones around vehicles. Up to six preprogrammed warning messages can be sounded when trigger inputs are activated. These triggers can be from lights, doors, etc.

An innovative and inexpensive way to provide an extra measure of safety for your passengers. Unlike just lights and tones, the use of distinct, situation-appropriate messages has been shown to increase passenger awareness and understanding inside the vehicle and within the danger zones outside the vehicle.

It comes preprogrammed with the most commonly required messages. All messages can be easily customized using our FREE software. Simple message updating--a small SD memory card quickly plugs in, to provide hours of messages.

### **System Includes:**

- Verbal Warning Control Module
- 2 Speakers
- Wiring Harness
- Preprogrammed Alerts.
- Free software to create your own alerts.
