

Bus-Scan BS300 RF

Child Reminder System

The Bus-Scan vehicle-check reminder alerts a driver to walk to the back of the vehicle at the end of each trip and visually check for remaining passengers or lost personal items. For Buses, Vans--any vehicle that transports those who need assistance. We have been making child reminders since 1997--longer and better than anyone else.

Bus-Scan BS300

Child Reminder System

The tragedy of leaving a child on a bus or van is compounded by the negative public relations and legal implications. Bus-Scan® Child Reminder is like having an inexpensive liability insurance policy, because it helps to protect the entire transportation operation. Students, drivers, parents and administrators can rest assured that every step has been taken to prevent passenger abandonment.

Here's How it Works:

At the end of each trip, turning off the ignition (or other activation source) sounds a reminder tone for the driver to begin a seat check. If the disarming switch at the back of the vehicle is not pressed within the programmed time, the vehicle horn will sound--alerting all who are nearby that the required check was not performed.

The Most Feature-rich Product of its Kind--at NO Additional Cost!

- Easily Integrated Dome Light Control Module
- User-settable 1, 2, 3 and 5 minute delays.
